

Domain AI For Scientific And Healthcare Workflows

HIGH IMPACT

Scientific AI requires domain benchmarks, source provenance, expert review, and clear separation between exploration and validated claims.

scientific datasets

benchmark harnesses

research notebooks

knowledge graphs

GPU infrastructure

USE CASES

- Evaluating model performance on biomedical or scientific reasoning tasks.
- Summarizing research literature and experimental context.
- Generating hypotheses for expert review.
- Comparing scientific models against domain-specific benchmarks.

ACTIONS YOU CAN TAKE

- Validate outputs with subject-matter experts.
- Record source evidence and experiment provenance.
- Separate benchmark performance from production or clinical readiness.

Aws/amazon: Announcing Agentic Catalog Experience In Amazon Quick

HIGH IMPACT

AWS/Amazon

Enterprise agents are moving from demos into multi-step workflows where traces, recovery, evaluation, and approval boundaries matter.

TAGS

Agents

Evals

IMPACT VIEW

KEY ENTITIES

AWS/Amazon

AWS

TOOLS IMPACTED

agent frameworks

workflow orchestration

evaluation harnesses

conversation logs

approval queues

USE CASES

- Automating multi-step support, operations, or engineering workflows.
- Training or evaluating agents on realistic task trajectories.
- Routing low-confidence work to human review.
- Reusing validated agent skills across teams.

ACTIONS YOU CAN TAKE

- Define the actions each agent can start, modify, and complete.
- Store workflow traces for review and regression testing.
- Measure completion, recovery, escalation, and quality outcomes.
